OEM EXHAUST TRIM

The chromed exhaust trim was one of the first products manufactured by OBA Tradizione Futura thus the experience achieved during these years allows us to manufacture all types, dimensions and shapes for all fulfilment's.

At present OBA Tradizione Futura manufactures chromed exhaust trims for Toyota, Mercedes, Jaguar, Rover, Fiat, Alfa, Lancia and Honda.

Thanks to it's team and collaboration with an external design studio, we are able to offer a number of alternative style proposals for fixation onto the OE silencer.

As you can see from some samples in this insert we can make a sporty customised item, complete with correct fixtures to make fixation assembly safe and quick.

The exhaust trim is designed around the style of the car, depending on if it is elegant or sporty. We use carefully selected stainless steel which will guarantee against heat, give a good surface treatment and a good durability against corrosion in time.

Recently OBA Tradizione Futura has invested in new technologies to manufacture exhaust trims in stainless steel with front part in aluminium. This allows us to make very complex and aggressive exhaust trims shapes which would not be possible if they were made from steel; besides we can add customised logo and surface treatments such as anodising which has never been made on this kind of product before.

OBA Tradizione Futura employs qualified suppliers with great experience in surface treatment such as polishing and anodising which protect and give a high reliability and quality appearance.
